

Easy book gaps:

Ledger

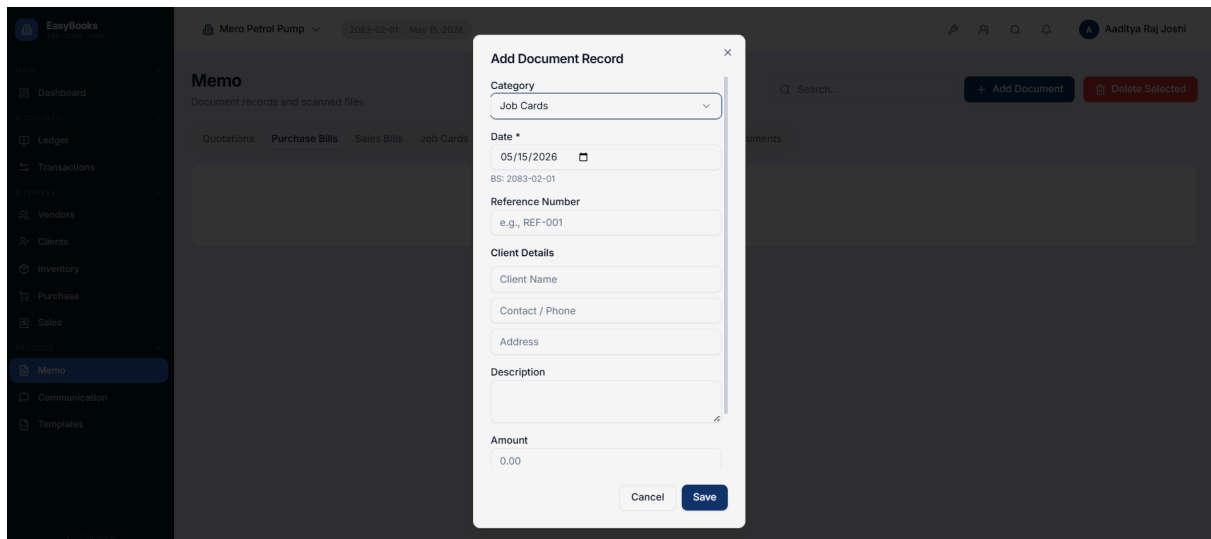

while creating ledger(Purchase Account, Sales Account, Expenses Account), are the fields sufficient ??if not what field we need to add? if some fields are not compulsory, make those optional.

The screenshot shows a web application interface for a 'Ledger' system. The main header includes 'Mero Petrol Pump' and a date '2023-10-01 - May 31, 2023'. The user 'Aaditya Raj Joshi' is logged in. The 'Ledger' section has tabs for 'Purchase Account', 'Sales Account' (selected), and 'Expenses Account'. A '+ New Account' button is in the top right. A modal window titled 'New Sales Account' is open, containing the following fields: 'Account Name *' with a placeholder 'Party name', 'Contact Person', 'Phone', 'Address', and 'Notes'. At the bottom of the modal are 'Cancel' and 'Create Account' buttons.

same for Transactions, Vendors, clients, inventory, Purchase, Sales, Memo, Focus on inventory there lot of inputs field, do we need all that? for example if some one with tea shop use this then things like model/partnumber are not needed right? I think this should be dynamic on the basis of business type right?

Also on :

Quotations, Purchase Bills, Sales Bills, Job Cards, Order Slips, Extra Work / Pending Supporting Documents. For all of these same fields.

in settings i can add compnay but i cannot create user. and what is preference.
i cannot fill that form.

now we have role implemented how to handle this?

decide yourself as you are an expert.
